

FREQUENTLY ASKED QUESTIONS

For additional information about the Slurry Seal Project, please visit cityoflagunaniguel.org/slurryseal

WHAT IS SLURRY SEAL?

A. Slurry Seal is petroleum-based emulsion product that is mixed with fine aggregate and applied evenly across the entire surface of an asphalt street.

WHAT DOES SLURRY SEAL DO?

A. Slurry Seal provides a protective surface to an existing asphalt street. A slurry seal application preserves the integrity of the street and will allow it to remain in good condition for a number of years.

WHAT PREPARATIONS WILL BE DONE TO THE STREETS?

A. Crews will seal any cracks and remove/replace compromised asphalt sections. Such activities may require crews making visits to your street. All work may be dusty and noisy.

WILL ACCESS BE LIMITED TO MY STREET?

A. Access to your street during the slurry seal application will be temporarily limited to be only between the hours of 8:00 am and 5:00 pm. Once the slurry seal has been applied, street access may be closed for up to 6 hours for the slurry seal to properly cure and dry. All work is subject to equipment failures, unforeseen and weather delays.

WILL POSTAL MAIL AND TRASH SERVICES BE IMPACTED?

A. These services should not be impacted significantly. All services will be notified ahead of time to modify their services. Please note, emergency services will not be impacted.

WILL I BE ABLE TO DRIVE IN/OUT OF MY DRIVEWAY?

A. No, vehicles will be permitted after the slurry has been applied and to dry for up to 6 hours. Please plan ahead and park on another street if you are planning on coming and going during the drying time. Sidewalks will not be affected. Work is subject to equipment failures, unforeseen and weather delays. Emergency services will not be impacted.

MY STREET IS CLOSED, BUT NO ONE IS HERE WORKING, WHAT IS GOING ON?

A. The contractor will slurry several streets in one day and usually the application process is relatively quick. Depending on the weather, hotter days will cure and dry the slurry faster.

WHY ARE SMALL ROCK AGGREGATES COLLECTING ALONG MY STREET?

A. This is a normal and expected short-term occurrence after the street has been slurry sealed. Street sweepers will collect the rocks as they progress along their sweeping routes.
